

eCraft Pro Software Install

Note: This was for Version 1 of the software and has since been upgraded to a normal software install process.

In the last few days I have had a number of questions about installing the eCraft Pro Software. It seems many are downloading the program itself when they in fact need the driver

download too. The instructions are on the download page but maybe it is because everyone is keen to get the download going and get that install / setup running on their PC. I have listed the instructions in this post only so you can follow them through as you connect your eCraft to your PC the first time. You may well not need the drivers download but for the sake of maybe having to go back to get it I suggest you download them before you start. Save them initially to you desktop so you can see them easily and it also makes it easier to tell your PC where they are if it asks you for them. While you are downloading your files you can get your USB cable ready to plug in but hold off doing that until you have both download folders on your desktop.

The folders are zipped up so if you have an unzip program you can use that or if not try right clicking on them and look for the command "Expand" as that will unzip the contents for you. When all that is done plug your USB cable into your PC and the other end into your eCraft and turn your eCraft on. watch your screen near the bottom right (near the clock) to see what it tells you in a small pop up. If it says all is installed you can then install the eCraft Pro Software. If not follow the step by step instructions to install the

correct drivers from the Craftwell instructions below. It may seem a lot at a glance but it is very quick and easy.

To get your software and drivers you need to register your machine on the Craftwell site. You may return at anytime and log in to obtain the downloads again or updates. [Registration and download link](#)

Install Instructions

Step 1 Connect your eCraft to your computer. Use only the USB cord supplied by Craftwell.

(If you see a pop up window mentioning drivers being detected and installed successfully, skip to Step 3)

Step 2 Click DOWNLOAD button to download drivers

- When prompted to Open or Save the file, click Save.
- Go to the area of your computer where your download files are saved.
- Look for a zip file called Drivers.
- Right click, and click Extract Files.
- Chose where you want to save the file to (ex/ Desktop). Click OK
- A new folder called Drivers will appear. Open it.
- Double click the file inside of the folder, and then double click the file called PreInstaller.
- When prompted, click Yes, then Install.

Step 3 Click DOWNLOAD button to download software

- When prompted to Open or Save the file, click Save.
- Go to the area of your computer where your download files are saved.
- Look for a zip file called eCraftShopProSetUp.
- Right click, and click Extract Files.
- Chose where you want to save the file to (ex/ Desktop). Click OK.
- A new folder called eCraftShopProSetUp will appear. Open it.
- Double click the file inside of the folder to begin the installation process.
- The eCraftshop Pro Wizard screen will appear. Click Next.

- Continue to follow prompts by clicking Next until you reach the Installation Complete screen. Click Close.
- Double click the eCraftshop icon. When prompted, enter your activation key.

If you have version 1.0 of eCraft Pro please keep watching for updates that will iron out the initial bugs and problems of this early version. My honest advice is **NOT** to install this version of the software as it causes a great deal of problems. Get used to cutting all types of card with your SD image card ready for when the new version is released.
